

Data Sheet Issue 09/2012

# **BYK-302**

Silicone surface additive for solvent-free, solvent-borne, and aqueous coating systems and printing inks with medium reduction of surface tension and medium increase of slip.

# **Product Data**

### Composition

Polyether-modified polydimethylsiloxane

#### **Typical Properties**

The values indicated in this data sheet describe typical properties and do not constitute specification limits.

Density (20 °C): 1.04 g/ml

#### Food Contact Legal Status

For the current food contact legal status, please contact our product safety department or visit www.byk.com for further information.

## **Applications**

#### **Coatings and Printing Inks**

#### **Special Features and Benefits**

The additive provides a medium reduction of surface tension in the coating systems. It increases slip and improves leveling and gloss. Silicone additives prevent the formation of Bénard cells. BYK-302 also improves substrate wetting and anti-blocking properties.

## **Recommended Use**

BYK-302 is used when solvent-free additives are required or when special solvents for preparation on site are desired. It can be used in all aqueous, solvent-borne, and solvent-free systems.

#### **Recommended Levels**

0.025-0.2 % additive (as supplied) based upon total formulation.

The above recommended levels can be used for orientation. Optimal levels are determined through a series of laboratory tests.

Data Sheet Issue 09/2012

#### **Incorporation and Processing Instructions**

The additive can be incorporated during any stage of the production process, including post-addition. Thinning before incorporation may make dosing easier.

#### **Special Note**

Unlike so-called silicone oils, this additive is very user-friendly. However, before use, one should determine in test series whether foam is stabilized in certain systems and check the recoatability and crater development.
