Additional ecological information : In solid state these minerals are a major part of the rocks of
the earth's surface.
They are dissolved in a natural state and indispensable part of
the natural waters.
These minerals are not biodegradable.
Negative effects on the environment should therefore be
excluded.
Restrictions may be indicated that concentrated suspensions
these minerals in natural waters may have an unfavorable
effect on water organisms (disturbance of the micro flora and -
fauna in the sediment and subsequent detriment to the
existence of higher water organisms).
